

Auditing issue — [REDACTED] indicated that 20% of GCSB's analytic workforce does not have accounts or access to key NSA databases. This is a particularly significant issue for GCSB as they provide NSA with NZL data which they have traditionally accessed via NSA tool/database interfaces (ie. GCSB analysts are unable to query or access NZL data). GCSB are also working to gain connectivity to DSD XKEYSCORE (as a first step towards connecting to other 2P XKs)
